

Half-cell high-efficiency solar panel is cutting cells One divides into two,it could reduce thermal resistance,improve output power 5-10W;it could meet 1500V whole system voltage design demand and reduce whole system cost 10%. In comparison to full solar cell modules,this one cells subfissure,power attenuation and sunshine occlusion is more lower;and excellent high temperature character. It is the best choice for large ground power station,Ecological agricul-ture fishery project and Distributed beach project.
